

GROEN Small Kettles

table-top kettles

steam jacketed kettles

Groen remains a trusted name in steam jacketed electric, gas and direct steam kettles. Our focus is to provide strategic selling points to combat the claims of other kettle manufacturers. Groen kettles provide many solutions for the institutional and chain markets. The details in our designs are what set Groen apart from the competition.

Not only has Groen been manufacturing kettles for nearly a century, we offer a full complement of small kettles - - more than any manufacturer.

GROEN Competitive Features and Benefits:

Smooth action hand crank (TDBC & TDHC models)

- **Greater Control** – The hand crank is located on either the left or right side for ergonomic ease of use by Operators.
- **Safer Operation** – Minimize spills that could lead to Operator accidents.

Increased water resistant 2/3rd jacketed 20 and 40 quart kettles

- Groen tabletop kettles were redesigned in accordance with IPX5, the European water resistance standard so they have greater water resistance than the competition.

3/8" solid bar rim and easy pour lip

- **Durability** – Solid Groen tabletop kettles have a reinforced bar rim that's more durable when Operators bang utensils after stirring. Kettles with rolled rims don't withstand these same Operator demands as a Groen kettle does.

High polish, #7 finish stainless steel kettle body

- **Ease of Cleaning** – Spilled liquids are more easily released from the high polish surface making clean up less time consuming for the Operator.
- **Long Lasting** – The shiny exterior finish on each hand polished Groen kettle always looks brand new in any kitchen setting, no matter how old it is!

GROEN TDBC Kettle with smooth action hand crank
